DATE MAILED: 01/31/2005				

Please find below and/or attached an Office communication concerning this application or proceeding.

VR

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>
	10/751,725	OUELLETTE ET AL.
	<b>Examiner</b>	<b>Art Unit</b>
	Norca L. Torres-Velazquez	1771

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 29 December 2004.
- 2a) This action is FINAL.                    2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1,3 and 10-13 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 1,3 and 10-13 is/are rejected.
- 7) Claim(s) \_\_\_\_\_ is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 05 January 2004 is/are: a) accepted or b) objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All    b) Some \* c) None of:
  1. Certified copies of the priority documents have been received.
  2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION**

***Response to Arguments***

1. The Terminal Disclaimer filed December 29, 2004 has been fully considered. The provisional obviousness-type double patenting rejection of claims 1, 2 and 10 over copending application No. 10/390,214 in view of US 5,562,646 and US Patent No. 6,534,174 in view of US 5,562,646 has been withdrawn.
2. Applicant's arguments filed December 29, 2004 have been fully considered but they are not persuasive.

a. Applicants have amended the independent claim 1 to also claim that the web has an Ambient Temperature (22 C) Oil Absorbency of at least about 7 g/g. Applicants argue that the MAYS reference (EP 017807 A2) teaches a base layer that form the major constituent of the fabric and that the fibers that can be used in the base layer are disclosed to be "polyester and Nylon 6, which have melting temperatures in the range of about 250-288 °C and about 213-221 °C, respectively...". Applicants indicate that these polymers in general would be significantly less oleophilic than lower melting point polymers used in the fibers of the thin outer layer(s) taught by the reference. Applicants conclude that since the major constituent of the MAYS fabric is a low oleophilicity polymer, the MAYS reference discloses a materially different structure than the present invention and that it should not be inferred that either the base layer of the fabric of MAYS, as a whole, would meet the elevated oil absorbency requirements of present claim 1.

It is noted that on page 14, lines 24-29 of the MAYS reference, the reference teaches that depending on the surface strength desired, the fiber content ratio of the fabric

could be as low as 90 percent polyester, 10 percent conjugate fiber, and as high as 10 percent polyester and 90 percent conjugate fiber. Applicants' arguments are directed to a high content of polyester or Nylon 6 in the fabric taught by MAYS as providing a materially different structure than the present invention and that it would not meet the oil absorbency requirements. However, the reference as noted above, teaches the use of a high conjugate fiber, low polyester content fabric structure which would meet the high oleophilicity polymer content required for the elevated oil absorbency requirements of the present invention. Therefore, it is the Examiner's position that it is reasonable to presume that this property is inherent to the nonwoven fabric of MAYS. The burden is upon Applicant to prove otherwise. *In re Fitzgerald 205 USPQ 594.*

b. With regards to the rejection of claims 10-13, these remain rejected under 35 USC 103(a) over MAYS in further view of BRASSINGTON (WO 93/22486) for the reasons stated above.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by MAYS (EP 0171807 A2) further evidenced by MAGNUSSON (WO 99/00098).

MAYS discloses an entangled nonwoven fabric having a layer of fusible fibers on one or both surfaces of a relatively thick layer of base fibers. The fusible fibers can be conjugate fibers.

The thermoplastic fibers are located on the outer surface of the base fibers either prior to or subsequent to the entangling of the fibers. (Abstract) The reference teaches the use of polyolefin fibers with a melting temperature in the range of about 163-171 °C as thermoplastic fusible fibers. (Page 4, lines 23-26) The reference teaches entangling the fabric and then passing it through a heating means where the low melting point component of the conjugate fibers is melted and bonding occurs at the point of intersection and tangency of the conjugate fibers. With this reinforcing of the outer surfaces by the bonding of the conjugate fiber to each other, the outer surfaces of the fabric are stronger and pilling and fraying is substantially decreased if not eliminated, without effecting the basic fabric characteristics, such as absorbency, of the base layer. (Page 6, line 31 through Page 7, lines 1-5) The reference teaches the use of sheath/core bicomponent fibers and also side-by-side conjugate fibers. (Page 9, lines 29-32) The reference teaches the use of fibers with lengths in excess of about 0.25 inches (0.635 cm) up to about 3 inches (7 cm). (Page 9, lines 35-36) In Figure 5, the reference shows a fabric with thermobonded fusible fibers in the surfaces. It is further noted that on page 14, lines 24-29 of the MAYS reference, the reference teaches that depending on the surface strength desired, the fiber content ratio of the fabric could be as low as 90 percent polyester, 10 percent conjugate fiber, and as high as 10 percent polyester and 90 percent conjugate fiber.

It is the Examiner's position that the MAYS reference provides the entangled synthetic fibers structure with a center region fibers not thermally bonded in the center region and with thermal bonding in the top and bottom surface. The reference meets the limitation of the fibers being bicomponent fibers of the sheath-core or side-by-side type. It is noted that eccentric bicomponent fibers are known in the art as a type of side-by-side bicomponent fiber. This is

evidenced by MAGNUSSON that teaches an absorbent article that uses thermoplastic bicomponent fibers of a side-by-side type. In Figure 2, the reference shows different types of side-by-side bicomponent fibers. Figure 2c is a bicomponent of an eccentric type. (Page 4, lines 1-11) It is the Examiner's position that MAYS teachings include side-by-side bicomponent fibers and this teaching is interpreted as being inclusive of all the different possible structures known in the art and evidenced by MAGNUSSON.

It is noted that although the prior art or record does not explicitly teach the claimed Ambient Temperature Oil Absorbency it is reasonable to presume that this property is inherent to the nonwoven fabric of MAYS. Support for said presumption is found in the use of like materials (i.e. a nonwoven of entangled bicomponent fibers that is heat bonded at the top and bottom surfaces; the fabric can have a fiber content ratio of 10 percent polyester and 90 percent conjugate fiber). The burden is upon Applicant to prove otherwise. *In re Fitzgerald* 205 USPQ 594. In addition, the presently claimed property of Ambient Temperature Oil Absorbency of at least about 7g/g would obviously have been present one the MAYS product is provided. Note *In re Best*, 195 USPQ at 433, footnote 4 (CCPA 1977) as to the providing of this rejection made above under 35 USC 102.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1771

6. Claims 10-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over MAYS as applied to claims 1,3 above, and further in view of BRASSINGTON (WO 93/22486).

MAYS is silent to the density of the nonwoven web.

BRASSINGTON is concerned with an absorbent material suitable for use in medical or hygienic applications. (Page 1, first paragraph) The reference teaches the use of bicomponent fibers (Page 3, line 17), and uses similar methods of bonding the fabric (Page 4, lines 20-24). On page 9, lines 29-31; the reference teaches that the fabric web has a weight of 165 g/m<sup>2</sup> and a thickness of around 3.5 mm. The Examiner has calculated the density of the fabric disclosed by the reference based on the weight and thickness of the web and it provides a density of 47.14 mg/m<sup>3</sup>. This value reads on the presently claimed density of about 100 mg/m<sup>3</sup> or less.

Therefore, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify the web of MAYS and provide with a density of 47 mg/m<sup>3</sup> as in the BRASSINGTON reference motivated by the desire to produce a web with a density that is acceptable with applications such as medical or hygienic absorbent products that are encompassed in the applications disclosed by the primary reference of MAYS.

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

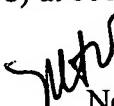

Art Unit: 1771

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Norca L. Torres-Velazquez whose telephone number is 571-272-1484. The examiner can normally be reached on Monday-Thursday 8:00-4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris can be reached on 571-272-1478. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
